

Children's university is a business where to the children of 4th to 6th grade of elementary school is given the place to foster learning and studying power and living power through their experiencing. This year in the 3 seminars of August 4(Sunday), 7(Wednesday) and 18(Sunday), 10 pupils participated from Higashi-Chichibu and Ogawa regions. They experienced making Traditional Japanese paper, visited Paper Museum and Eiichi Shibusawa data library, and making wind bells using Japanese paper.

The children apparently passed meaningful time as they were able to experience not usual matters in daily school life. We will continue to make a project which children can enjoy in learning in the next year, too.
